

WORLD´S LARGEST WIRELINE SMSC – POWERED BY THOR!

By connecting all German mobile operators to its wireline SMSC, T-Com has created one of the largest SMSC installation of any fixed line service provider world-wide. All short-message traffic between the growing number of SMS-capable wireline phones, as well as traffic between wireline and mobile users is controlled by THOR, the leading value-added services platform delivered to T-Com by SPEECH DESIGN. The huge popularity of text messaging is still unbroken, a trend further supported by its extension to wireline customers.

In September of 2004, THOR replaced T-Com´s pre-existing Fixed-SMSC solution.. As soon as in March 2005, the successfully integrated platform was expanded for the first time in order to fulfill the growing capacity demand.

THE THOR TECHNOLOGY ADVANTAGE

SPEECH DESIGN´s THOR platform enables a flexible system adaptation to new market requirements and technological progress. The exclusive use of open interfaces provides T-Com with unprecedented transparency, supporting fast and easy system evolution.

Another unique feature of THOR technology is the automatic recognition of target terminal devices (SMS – capable or traditional wireline phones, fax machines, ...) resulting in a correct delivery of messages sent to that number.
